CANADIAN PATENT

No. 268,626. Drive Mechanism.

Mécanisme de transmission.

Wallace C. Gray, Assiniboia, Saskatchewan, Canada, 1st March, 1927. Filed 30th April, 1926. Serial No. 313,434.

Claim.—2. The combination with the driving shaft and the tool rest of an emery stand, of an arm attached to the tool rest, a flexible tubular casing having one end secured to the arm, a bearing sleeve permanently attached to and continuous with the other end of the casing, a spindle rotatably mounted within the sleeve and projecting there beyond, a stone secured to the projecting end of the spindle, a flexible driving element passing through the casing and permanently secured to the spindle at one end, and a sleeve permanently secured to the other end of the driving element and screw threaded onto the driving shaft of the emery stand.

3. The combination with the driving shaft and the tool rest of an emery stand, of an arm attached to the tool rest, a flexible tubular casing having one end secured to the arm, a bearing sleeve permanently attached to and continuous with the other end of the casing, a spindle rotatably mounted within the sleeve and projecting there beyond, a stone secured to the projecting end of the spindle, a cable passing through the casing and having one end permanently secured to the spindle and a sleeve permanently secured to the other end of the cable and screw threaded onto the driving shaft of the emery stand.

4. A flexible drive for attachment to an emery stand comprising a flexible casing, a sleeve permanently secured to one end of the casing, a bearing sleeve secured to the latter sleeve, a spindle rotatably mounted within the bearing sleeve and extending there beyond, a stone attached to the latter end of the spindle, a bearing sleeve secured to the other end of the casing and projecting into an attaching arm, a metallic cable passing through the casing and having one end permanently secured to the spindle and an interiorally screw-threaded sleeve permanently secured to the other end of the cable.
